Re: TV station WORO DT, Fajardo, PR (Facility ID 73901)
Notification of Licensed Power Operations, Resumption
And additional STA request.

Dear Ms. Dortch:

I am the technical consultant to the Catholic, Apostolic & Roman Church in Puerto Rico (the "Licensee"), licensee of TV Station WORO DT, Fajardo, Puerto Rico (Facility ID No, 73901).

The station was off the air on September 20, 2017, File No. 68232, because of sustained hurricane damage. More than a year later, on October 21, 2018, the station commenced low power operations at 1750 watts with a new Comark transmitter, using a Channel 13 Yagi specific antenna on tower ASR 1011469.

Subsequently, on January 16, 2019, a new Channel 13 Micronetixx antenna was hoisted and side-mounted on the landlord's tower, ASR 1011469, at a height of 130 feet AGL, at center of radiation. Since then, **WORO-DT** has been operating with a TPO of 19.5 kilowatts at **licensed ERP power levels**.

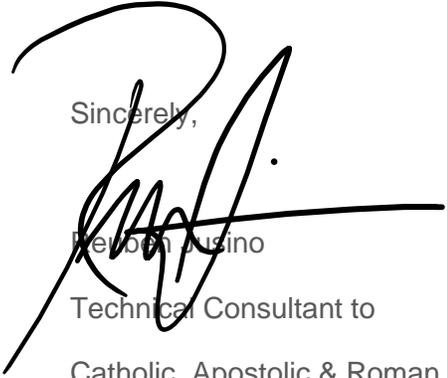

The antenna COR is currently below the authorized height by 75 ft, or 22.8 meters. The tower underwent refurbishment, and this obligated the licensee to reconsider the positioning of the antenna on the structure, ASR 1011469.

The licensee is requesting a Special Temporary Authority to operate WORO-DT at variance from its authorized parameters, specifically the licensee asks that WORO-DT be allowed continued operation of its antenna facilities with a center of radiation at 130ft, 39.62 meters AGL. Since full power operations began, no interference reports have been received by the licensee nor has its coverage been adversely affected at this COR.

During the STA period, if granted, licensee will conduct all appropriate engineering studies and administrative procedures to formally request operation at this lower COR of approximately 40 meters AGL permanently.

This letter shall serve as a formal notification of the licensees' return to licensed power, regarding File No. 68232. Any questions regarding the subject matter we respectfully request that you communicate with this office.

Sincerely,

Raymond J. Busino

Technical Consultant to

Catholic, Apostolic & Roman Church in PR
