

## STA EXHIBIT

WQHA has experience some technical problems with the transmission equipment. The site area constantly experiences lack of power electric service during hours a day and frequently during various continuous days, a week. We wish to verify the antenna and transmission line due to standing wave ratio (SWR) outside the accepted parameters. WQHA lack a power generator equipment at this moment to cover the interruptions of Puerto Rico Power Electric Authority. The temporary site of WCCV-TV includes the service of a diesel power generator to bring stable Station Operation during power interruptions. This temporary relocation will give WQHA the opportunity to continue service its Community of License and TV viewers across the island.
