Reduced Power Notification

WCNC-TV, Inc. (“Licensee”), licensee of low power television station W36FB-D, Biscoe, NC (the “Station”), hereby notifies the Commission that the Station suffered an equipment failure on March 1, 2022, and accordingly is operating at 50% power. The Station was displaced in the post-Incentive Auction repacking and was converted to a combined amplifier system in order to accommodate the size and power requirements of the displacement facility’s antenna and transmission line. While the antenna, transmission line, and mask filter are new, the transmitter and exciter are over 10 years old. The Station’s power loss is due to multiple FET failures on Amp 1 causing its power output to drop. Licensee has determined that the failures result from grounding issues and is in the process of determining next steps to restore the Station to full power.
