

# COMPREHENSIVE ENGINEERING W252AW

Applicant wishes to move W252AW to a new site, changing height and power to better serve the broadcast area.

The proposed site meets requirements to provide a 60dBu contour which overlaps the licensed contour.

This is evident as the proposed 60 contour encompasses the current licensed site of W252AW.

The proposed site shows adequate clearance to LPFM station WGHC-LP as the 40 dBu contour does not overlap the 60 of the LPFM.

There is no contour overlap to WCCQ which is also co-channel

Second channel adjacent station overlap is satisfied by a waiver request
