

**All-Purpose Exhibit**

This exhibit is to advise the Commission that as of April 15, 2022, technical issues with the station's transmitter have caused WPTZ to operate at reduced power. The station initially was operating stably at 50% power, and following consultation with a third-party vendor, the station is currently operating at approximately 86% power (559 kW ERP). A replacement transmitter has been ordered, and the station is awaiting delivery.

If resolving the issue should take more than 30 days, the station will file a request for STA.
