Re: 2 Shively Labs 6025 Antennas for WVNH

Site Location: Whittier Communications W. Ossipee, NH

On April 20, 2022 two log periodic antennas (antenna 1, antenna 2) were observed to have a true north of 30° (antenna 1) and 323° (antenna 2) with an accuracy of plus or minus one (1) degree. The antennas were located by means of triangulation taken from a baseline that was established through GPS/RTK observations referenced to published NGS control data.
