

### Compliance with RF Warning Signs Condition

The subject construction permit includes the following condition:

Warning signs which describe the radiofrequency electromagnetic field radiation hazard must be posted at appropriate intervals, including on and around both of the grain silos. Access to both of the grain silos must be restricted to prevent the exposure of humans to RF emissions in excess of the FCC guidelines (OET Bulletin 65, Edition 97-01, released August 1997). Documentation demonstrating compliance with this special operating condition must be submitted with the FCC application for license.

As demonstrated in the photographs below, warning signs have been posted and access to both grain silos has been restricted by the installation of a locked panel that prevents unauthorized persons from climbing to the top of the silos.
