### TECHNICAL MEMORANDUM

A recent measurement and proof of performance conducted by TEGNA on the KWES-TV transmitter plan has resulted in a determination that to achieve an ERP of 94.4 kW, the TPO must be adjusted from 10.33 kW to 11.1 kW. The total system loss has thus been adjusted from 1.39 dB to 1.7 dB in order to maintain the licensed ERP of 94.4 kW. It should be noted that no physical change to any of the equipment has been made. The instant application is an instrument of correction to the license parameters.

Sincerely,

Ryan Wilhour  
Consulting Engineer
