

**JUSTIFICATION FOR REDUCED POWER STA EXTENSION**

Pursuant to Section 73.1560(d) of the Commission's rules, this is to request an extension of the current reduced power special temporary authorization for station WOLG, File No. BSTA-20220203AAA.

Station WOLG is currently operating with a main transmitter that can only generate roughly 70-75% of the required transmitter power output. The station's existing main transmitter is approximately 30 years old and despite our best efforts it has been determined to be non-repairable. The licensee is in the process of obtaining a replacement transmitter but we have found the market to be tight at the present time. We therefore request an additional 180 days to operate at reduced power while we endeavor to locate and purchase a suitable replacement transmitter.

The public interest, convenience and necessity would be well served by a grant of this request, which will permit WOLG to remain on the air and provide its unique quality program service.
