

ENGINEERING EXHIBIT

Digital Low Power Television Station Application for Minor Modification of Licensed Facility Amendment to LMS File# 0000197967

prepared for

Gray Television Licensee, LLC

K30RA-D Racine, MN

Facility ID 186459

Ch. 30 15 kW Directional

Gray Television Licensee, LLC (“*Gray*”) is the licensee of digital Low Power Television station K30RA-D, Channel 30, Facility ID 186459, Racine MN. K30RA-D is licensed to operate at 1.55 kW effective radiated power (“ERP”) with a directional antenna (file# 0000178831). A minor modification application is pending (file# 0000197967) for a Construction Permit to relocate K30RA-D, increase antenna height, and reduce ERP. *Gray* herein amends the pending application to specify an alternate directional antenna at increased ERP and height.

The proposed facility will employ an antenna to be top-mounted on an existing tower at the studio location for K30RA-D and *Gray*’s full power television station KTTC (Facility ID 35678, Rochester, MN), located 20.2 km (12.6 miles) from the licensed K30RA-D site. The proposed K30RA-D antenna will be installed in place of an existing weather radar antenna (no longer in use). The structure’s overall height above ground will increase by 1.8 meters to 47.5 meters. The structure does not require an FCC Antenna Structure Registration number since the overall height is less than 61 meters above ground and the structure passes the FCC’s “TOWAIR” slope test program.

The proposed antenna is a Dielectric model TLP-8M/VP having elliptical polarization. The proposed ERP is 15 kW horizontally polarized and 4.5 kW vertically polarized using a “full service” out of channel emission mask. A plot of the directional antenna’s azimuthal pattern is supplied in Figure 1.

Figure 2 depicts the coverage contour of the proposed facility as well as that of the licensed facility, demonstrating compliance with §73.3572 for a minor change. Since the proposed 51 dB μ contour encompasses that of the licensed facility, no service loss area will be created. Significant service improvement will result as the population within the 51 dB μ contour increases to 167,007 persons (2010 census), which is a 40.0 percent increase beyond the 119,320 persons within the licensed K30RA-D facility's 51 dB μ contour.

Interference study per OET Bulletin 69¹ shows that the proposal complies with the FCC's interference protection requirements toward all digital television, television translator, LPTV, and Class A stations. FCC processing of this proposal is requested using a 0.5 km cell size and 1.0 km terrain profile increment. The results, summarized in Table 1, show that any new interference does not exceed the FCC's interference limits (0.5 percent to full power and Class A stations, and 2.0 percent to secondary stations) to any facility except with respect to K29OE-D which does not present a conflict for the proposal.

The licensed facility for K29OE-D (Ch. 29, Fac ID 186458, Racine MN, file# 0000179250) would receive 4.73 percent new interference from the proposed K30RA-D facility, which exceeds the 2.0 percent limit towards other low power television stations. A pending application facility (file# 0000197968) for K29OE-D would receive 7.36 percent new interference. *Gray* is also the licensee of K29OE-D and consents to interference exceeding 2.0 percent from the proposed K30RA-D facility. Further, *Gray* is contemporaneously submitting a minor modification application amendment regarding K29OE-D to share the antenna that is proposed herein for K30RA-D, which will eliminate any interference conflict between these first-adjacent channel facilities. Buildout of the K30RA-D and K29OE-D facilities will be coordinated such that both stations are relocated simultaneously, thus avoiding any actual interference. The proposed K29OE-D facility is also included in the interference analysis of Table 1. Accordingly, the

¹FCC Office of Engineering and Technology Bulletin number 69, *Longley-Rice Methodology for Evaluating TV Coverage and Interference*, February 6, 2004 (“OET-69”). This analysis employed the FCC’s current “TVStudy” software with the default application processing template settings, 0.5 km cell size, and 1 km terrain increment. Comparisons of various results of this computer program (run on a Mac processor) to the FCCs implementation of TVStudy show excellent correlation.

proposal complies with §74.793 regarding interference protection to digital television, low power television, television translator, and Class A television facilities.

Human Exposure to Radiofrequency Electromagnetic Field (Environmental)

The proposed facility was evaluated for human exposure to RF energy using the procedures outlined in the FCC's OET Bulletin Number 65. Based on OET-65 equation (10) and 25 percent antenna relative field in downward elevations (pattern data shows 25 percent or less relative field at angles 10 to 90 degrees below the antenna), the calculated power density attributable to the proposed K30RA-D facility at locations near the transmitter site at a height of two meters above ground level is $22.0 \mu\text{W/cm}^2$, which is 5.8 percent of the general population / uncontrolled maximum permissible exposure limit.

The only other significant emitter that would affect locations near the site is that of the proposed K29OE-D facility. Calculations show that the proposed K29OE-D facility would contribute RF signal density at 5.9 percent of the general population / uncontrolled maximum permissible exposure limit. Summing the individual contributions from K30RA-D and K29OE-D, the total maximum calculated RF density at two meters above ground level near the proposed site will be 11.7 percent of the FCC's uncontrolled / general population maximum permissible exposure limit.

The general public will not be exposed to RF levels attributable to the proposal in excess of the FCC's guidelines. RF exposure warning signs will continue to be posted. With respect to worker safety, the applicant will coordinate exposure procedures with all pertinent stations and will reduce power or cease operation as necessary to protect persons having access to the site, tower, or antenna from RF electromagnetic field exposure in excess of FCC guidelines. This exhibit is limited to the evaluation of exposure to RF electromagnetic field.

Channel and Facility Information

Section	Question	Response
Facility ID	186459	
State	Minnesota	
City	RACINE	
LPD Channel	30	

Section	Question	Response
Antenna Location Data	Antenna Structure Registration	Do you have an FCC Antenna Structure Registration (ASR) Number?
		ASR Number
Coordinates (NAD83)	Latitude	44° 05' 32.0" N+
	Longitude	092° 30' 34.0" W-
	Structure Type	LTOWER-Lattice Tower
	Overall Structure Height	47.5 meters
	Support Structure Height	42.1 meters
	Ground Elevation (AMSL)	342.6 meters
Antenna Data	Height of Radiation Center Above Ground Level	45.0 meters
	Height of Radiation Center Above Mean Sea Level	387.6 meters
	Effective Radiated Power	15 kW

Antenna Technical Data	Section	Question	Response
	Antenna Type	Antenna Type	Directional Custom
		Do you have an Antenna ID?	No
		Antenna ID	
	Antenna Manufacturer and Model	Manufacturer:	Dielectric
		Model	TLP-8M/VP
		Rotation	160 degrees
		Electrical Beam Tilt	0.5
		Mechanical Beam Tilt	Not Applicable
		toward azimuth	
		Polarization	Elliptical
	Elevation Radiation Pattern	Does the proposed antenna propose elevation radiation patterns that vary with azimuth for reasons other than the use of mechanical beam tilt?	No
		Uploaded file for elevation antenna (or radiation) pattern data	
		Out-of-Channel Emission Mask:	Full Service
