

Technical Statement

This Technical Statement and attached exhibits were prepared on behalf of WYCO1061 Inc. (“WYCO”), applicant of Station WYCO-LP, Channel 291, licensed to York, PA. WYCO herein is filing the Form 319 application to cover Construction Permit 0000194032 and to modify the number of antenna bays and the radiation center. 7.875(c)(1) allows for *Replacement of an antenna with one of the same or different number of antenna bays, provided that the height of the antenna radiation center is not more than 2 meters above or 4 meters below the authorized values. Program test operations at the full authorized ERP may commence immediately upon installation pursuant to § 73.1620(a)(1).*

The only changes to WYCO-LP’s licensed parameters are correcting the number of antenna bays, correcting the RC-AGL, Height Above Average Terrain (HAAT) and Radiation Center Above Mean Sea Level (RC-AMSL). The use of a two bay antenna lowers all values by 1.4 meters.

Corrections included in previous License Application:

The correct RC-AGL is 9.2 meters

The adjusted RC-AMSL is 127.2 meters

The adjusted HAAT is -22.4 meters
