

Due to the weather related (lightening) event that took out the WKSW High Voltage power supply cabinet inrush resistors and associated contactor coils, WKSW is operating at greatly reduced power from its normal, main operating location.

WKSW normally makes 16,800 watts I to a 6 bay antenna.

In emergency mode, WKSW is operating a Nautel VS1 transmitter making 1400 TPO through a reducer into WKSW's main 6 bay antenna.

My best guesstimate is WKSW is making an ERP of around 5000 watts.

Kindest regards,

Bobby Gray  
Chief Engineer/Chief Operator  
WKSW
