Request for Special Temporary Authority for an additional six months to remain silent due to technical problems.

Station WXXK, Clarksburg, West Virginia, Facility ID 67102.
Current STA FCC File 0000199236

Radio station WXXK underwent severe damage in a lightning strike on August 24, 2022. Licensee is sourcing parts to repair multiple isocouplers at the base of its tower as well other parts since the strike was so serious. Licensee suspects there is also damage to the ground system and underground coax. Licensee will have to wait until the site is more accessible to determine the ground system/coax status. With the supply chain issues and continued investigation of the extent of the overall damage, Licensee cannot determine exactly when operations will be restored. Licensee will try its best to return to the operation as soon as it is possible.

The above information is to the best of my knowledge and belief.
