

## **BASIS FOR REQUESTED EXTENSION OF ENGINEERING STA**

Freisland Broadcasting Corp. (“Freisland”), the licensee of Station KAZY, Cheyenne, Wyoming (FIN: 162407) is requesting an extension of the Special Temporary Authority to allow it to continue to undertake operation of the Station, on a low power basis, pending a return to operations according to its licensed operating parameters.

The STA was required because, on September 27, 2022 vandals broke in to the shared transmitter site of KAZY and KRRR(FM), removed copper materials and physically damaged both transmitters, resulting in the failure of several power supply modules and resulting in the inability to reach full power on either Station.

Brahmin has been working on the repair of the Station facilities. At the present time, the repair contractor has only been able to have two power supply modules fixed and working and those two have now been installed and are operating, allowing more power output. However, the Station cannot return to licensed operating parameters until the remaining two modules are returned to operation. Freisland is working with its contractor to achieve this result at the earliest possible time.

Pending completion of the repair work, Freisland requests that the STA for the Station be extended.
