

## WMGI FORM 302

WMGI's antenna has been replaced with an ERI SHPX-6AC full wavelength spaced antenna tuned to 100.7 MHz and 99.9 MHz in order to combine the 50 kW WMGI facility with the WTHI-FM 38 kW facility authorized in construction permit # 0000167944.

The combined RF for the two facilities was reported in the WTHI-FM form 301 application and complies with Commission limits.

A spurious emissions test report is attached to this form 302 filing to document emission compliance for the two combined facilities.

A slight coordinate correction (less than 1 second) is specified to agree with the current antenna structure registration in accordance with Commission rules. There are no changes in the ERP or antenna heights..
