

Section 73.1690 Compliance and Compliance with Special Operating Conditions and Restrictions

The outstanding auxiliary construction permit specifies an Effective Radiated Power (ERP) of 4.0 kW. The transmitter in place for the authorized FM auxiliary facility is rated for a maximum power output of 5 kW. With a transmitter power output of 5.0 kW, the auxiliary transmission system can only achieve an ERP of 3.8 kW. Pursuant to Section 73.1690(c)(8) of the FCC Rules, the slight reduction in ERP for the auxiliary facility is a permissible change and may be reported via the instant application of license. The subparts of Section 73.1690(c)(8), which all pertain to main facility authorizations, are not applicable to auxiliary facility specified herein.

The applicant in coordination with other users of the site is committed to reducing power or ceasing operation as necessary to protect persons having access to the site, tower or antenna from radiofrequency electromagnetic fields in excess of FCC guidelines. In addition, the Applicant commits to complying with any special operating conditions or restrictions listed on the construction permit which requires no action or specific response at licensing.
