

On May 25, 2023, K204AL, facility ID 20513, serving Pocatello, Idaho, was able to resume full operations.

Several areas were fixed to resume operations.

A new replacement translator of the same type, make and model with the same power rating as listed on the original license was installed.

A bandpass filter was added to the receive input of the translator, removing interference from neighboring, high-power stations. The translator receiver section was being de-sensitized by the other incoming signals and hindering the reception of KCIR. With the new filter, the translator was able to receive a clean and strong signal from KCIR on 90.7MHz.

Improvements were made to the cabling from the receive antenna and to the transmission line, allowing for a broadcast on the original antenna.

K204AL is now actively serving the Pocatello, ID community and will remain broadcasting continuously and indefinitely.
