MODIFICATION TO CONSTRUCTION PERMIT

This application is a proposed change to a granted construction permit. The general proposal is chiefly the same as the granted construction permit except the coordinates needed to be moved approximately 35 m along the similar terrain elevation to match the location of a shed on the property where the antenna is to be located. The AGL and COR AMSL was also changed by -0.2 meters. A different antenna yagi manufacturer/model was also specified (vertical polarization), but similar to the last antenna pattern. Community of license was changed to San Fernando, which is allowed in minor changes for FCC secondary services stations.
