

KXRS Engineering STA extension

Lazer Licenses continues to actively and diligently work toward implementation of the site authorized in its outstanding construction permit for which authorizes operation on the adjacent channel at a new site with a change in community of license (from Channel 289A Hemet to Channel 288A Beaumont) including but not limited to gathering and submitting all of the information requested by the county in which the site authorized in the CP is located as part of the building permit approval process. Since the grant of the last STA extension, the county requested additional soil testing which is not in the review process.

A grant of this extension request will allow the station to continue to provide service to its listeners while permitting and implementation are conducted.
