**ENGINEERING REPORT**

---

**W221CU, Allentown, PA Minor Change of Primary Input Station to WJCS(FM)**

**ENGINEERING STATEMENT**

Licensed FM translator station W221CU herein proposes to change its primary input station to WJCS(FM), Allentown, PA 207A (FCC Facility ID 4370).

WJCS(FM) is a licensed station. This proposed change applies to the licensed W221CU facility; and there are no other granted authorizations and there are no pending applications for the FM translator.

W221CU is a Fill-In FM translator to WJCS(FM). This is demonstrated by the attached Figure EE1. Since the transmitter site is the same for both WJCS(FM) and W221CU, the signal delivery method to the translator is via wired transmission.

Both HD1 (the simulcast of the analog WJCS signal) and HD2 will be used.
