

Concerning an extension of STA for KHTU-FM Wray, CO FID 176806

KHTU Wray has been operating under STA to maintain service to Wray under FCC letter dated December 21 2021.

The proposed continuing STA operation requested is as follows:

Coordinates	40 03 30 N 102 11 22 W
Frequency	88.1MHz Channel 201
Operating Power	100 Watts
Antenna type	vertical whip mounted 10m AGL on existing tower
tower registration	ASR1322048

Construction Permit for the proposed permanent facility has been granted file # 0000162610

A suitable transmitter has been obtained and has been moved to the site. The feedline and components for the proposed antenna are being assembled in preparation for mounting on the tower. It is expected that the tower work can be completed to mount the antenna at the specified height on the tower when warmer weather arrives in the springtime. The transmitter and antenna will be tested and a form 302 for license will be submitted shortly thereafter. It is expected that a complete license application showing can be completed in the third quarter of 2024

Respectfully submitted

Timothy C Cutforth

Director of Home Town Radio

Licensee of KHTU
