

Advancement of FCC Educational Program Supplement

The purpose of this exhibit is to demonstrate Northwest Fishing Association educational objectives and that the proposed radio station will be used for the advancement of an educational program under 73.503(a) of the Rules.

There are many rivers and lakes in our area which the public has access to. Therefore, Northwest Fishing Association desires to provide a channel for educating our community about environmental stewardship and sustainable fishing practices, focusing on issues of concern to the Pacific Northwest and local bodies of water.

Northwest Fishing Association's most important goal is to increase environmental impact awareness and stewardship, while providing a voice to stewards in the Gresham area.

We strongly believe in informing local citizens of conservation and sustainable fishing practices, and supporting environmental protection. We promote an environmentally informed community.

NW Fishing Association intends to utilize the radio station to extend its educational mission to the airwaves by providing:

- Conservation awareness programming and environmental guardianship programming.
- Facilitating the opportunity to develop radio shows related to ecological education.
- Helping community members develop radio shows and podcasts.
- Public affairs programming featuring public and independent voices from our community.
- A broadcast platform for community members concerned about our local environment and sustainable fishing related policies and concerns.

Our mission is to save the environment and local waters and fish so that they may be enjoyed by future generations so that they may have the same opportunities to enjoy Nature as we have.
