SECOND ADJACENT WAIVER REQUEST

License respectfully requests a "second adjacent channel waiver" with regards to Section 47 C.F.R. Section 73.807 of the FCC rules based upon the "Living Way" precedent (Living Way Ministries, Inc., Memorandum Opinion and Order, 17 FCC Red 17054, 17056, ¶ 5 (2002), recon. denied 23 FCC Red 15070 (2008)). This will be accomplished by using Free Space methodology of calculation.

KIPO 207C0 and KTUH 211C1 are the second adjacent channels the facility is short spaced to.

At the proposed site, KIPO has a signal strength of 106 dBu (FCC), and KTUH 98.6 dBu

Interference will occur when the smaller of two station's (KTUH) signal strength's interfering signal exceeds the desired signal by 40 dBu. So the area of predicted interference would then be bounded by the 138.6 dBu contour.

The distance to this contour, using free space method:

$$D = (7.01 * P^{1/2}) / E,$$

where P is power (watts), E is field strength (v/m), and D is distance to contour (meters):

$$P = 100 \text{ w}, E = 138.6 \text{ dBu } D = 8.2 \text{ meters}$$

However, the field strength of the proposed LPFM's antenna system falls quickly at depression angles below the horizon. Using elevation pattern data provided by Shively for a ring-stub type antenna setup (2 Bay Shively 6812 1/2 wave spaced) the distance to the 138.6 dBu contour at various depression angles is tabulated below. The data shows that the lowest point at which the signal strength rises to 138.6 dBu is 2.5 meters below the center of radiation of the antenna system, or 2.5 meters above the roof. Therefore, this is sufficient clearance of the nearby one-story office park structures, and the interference area encompasses zero population. The table below shows that the lowest elevation point of the 138.6 F(50,10) interfering contour is 2.5 meters above roof.

Due to zero population within this radiation radius, this meets the "Living Way" Criteria to qualify for a Waiver of 47 C.F.R. Section 73.807.

Thus, the applicant requests a second adjacent waiver based upon evidence no interference is proposed.

NON IONIZING ELECTROMAGNETIC RADIATION

An opposed V dipole was used to gauge the maximum RF for the proposal in OET program FM Model (100 watts, 2-bay, 0.5 wave, H+V-pol). The maximum predicted RF exposure was 90.1 $\mu\text{W}/\text{cm}^2$ at 4.6 m away on the roof of the small penthouse (which has no human access), 45.1% of the FCC Maximum Permissible Exposure (MPR) for 200 $\mu\text{W}/\text{cm}^2$ for uncontrolled environments.

The site will have a sign regarding RF exposure hazards to tower climbers posted. If any work needs to be done around the structure the RF power will be temporarily shut off.
