

## ENGINEERING EXHIBIT

### Displacement Application of Licensed Digital Low Power Television Station

prepared for

**Gray Television Licensee, LLC**  
KMNF-LD Mankato, MN  
Facility ID 183814  
Ch. 8 3 kW Nondirectional

*Gray Television Licensee, LLC* (“*Gray*”) is the licensee of digital Low Power Television station KMNF-LD, Channel 7, Mankato MN, Facility ID 183814. KMNF-LD is licensed (file# 0000090446) to operate with 3 kW effective radiated power (“ERP”), nondirectional. The licensed Channel 7 facility is displaced by a new full-service television station that has recently commenced operation. *Gray* herein seeks a displacement Construction Permit (“CP”) to change to Channel 8 while continuing to utilize the licensed transmitting location and nondirectional ERP, with a slight reduction in antenna height.

The licensed Channel 7 facility is displaced due to predicted interference caused to KONC (Facility ID 776087, Alexandria MN, 181 km distant). KONC arose from FCC Auction 112 and is now licensed (file# 0000220950). Table 1 supplies an interference analysis summary regarding KONC, showing that KMNF-LD causes 3.64 percent predicted interference to KONC.

As with the licensed Channel 7 operation, the proposed KMNF-LD Channel 8 facility will employ a side-mounted antenna on the tower structure associated with FCC Antenna Structure Registration number 1025277. The proposed Channel 8 antenna’s center of radiation will be 293.5 meters above ground level, a 2.8 meter reduction from the licensed height. No change to the overall structure height will result.

The proposed antenna is a Dielectric model TLS-V4 having elliptical polarization. The nondirectional ERP is 3 kW horizontally polarized and 0.9 kW vertically polarized using a “full service” out of channel emission mask. Figure 1 depicts the coverage contour of the proposed

facility and that of the licensed facility, demonstrating compliance with §73.3572 for a minor change.

Interference study per OET Bulletin 69<sup>1</sup> shows that the proposal complies with the FCC's interference protection requirements toward all digital television, television translator, LPTV, and Class A stations. The results, summarized in Table 2, show that any new interference does not exceed the FCC's interference limits (0.5 percent to full power and Class A stations, and 2.0 percent to secondary stations) to any facility.

### **Human Exposure to Radiofrequency Electromagnetic Field (Environmental)**

The proposed facility was evaluated for human exposure to RF energy using the procedures outlined in the FCC's OET Bulletin Number 65. Based on OET-65 equation (10) and 20 percent antenna relative field in downward elevations (pattern data shows 20 percent or less relative field at angles 30 to 90 degrees below the antenna), the calculated power density attributable to the proposed facility at locations near the transmitter site at a height of two meters above ground level is 0.06  $\mu\text{W}/\text{cm}^2$ , which is 0.03 percent of the general population / uncontrolled maximum permissible exposure limit. This is well below the five percent threshold limit described in §1.1307(b) regarding sites with multiple emitters, categorically excluding the applicant from responsibility for taking any corrective action in the areas where the proposal's contribution is less than five percent.

The general public will not be exposed to RF levels attributable to the proposal in excess of the FCC's guidelines. RF exposure warning signs will continue to be posted. With respect to worker safety, the applicant will coordinate exposure procedures with all pertinent stations and will reduce power or cease operation as necessary to protect persons having access to the site, tower, or antenna from RF electromagnetic field exposure in excess of FCC guidelines. This

---

<sup>1</sup>FCC Office of Engineering and Technology Bulletin number 69, *Longley-Rice Methodology for Evaluating TV Coverage and Interference*, February 6, 2004 ("OET-69"). This analysis employed the FCC's current "TVStudy" software with the default application processing template settings, 1 km cell size, and 1.0 km terrain increment. Comparisons of various results of this computer program (run on a Mac processor) to the FCCs implementation of TVStudy show excellent correlation.

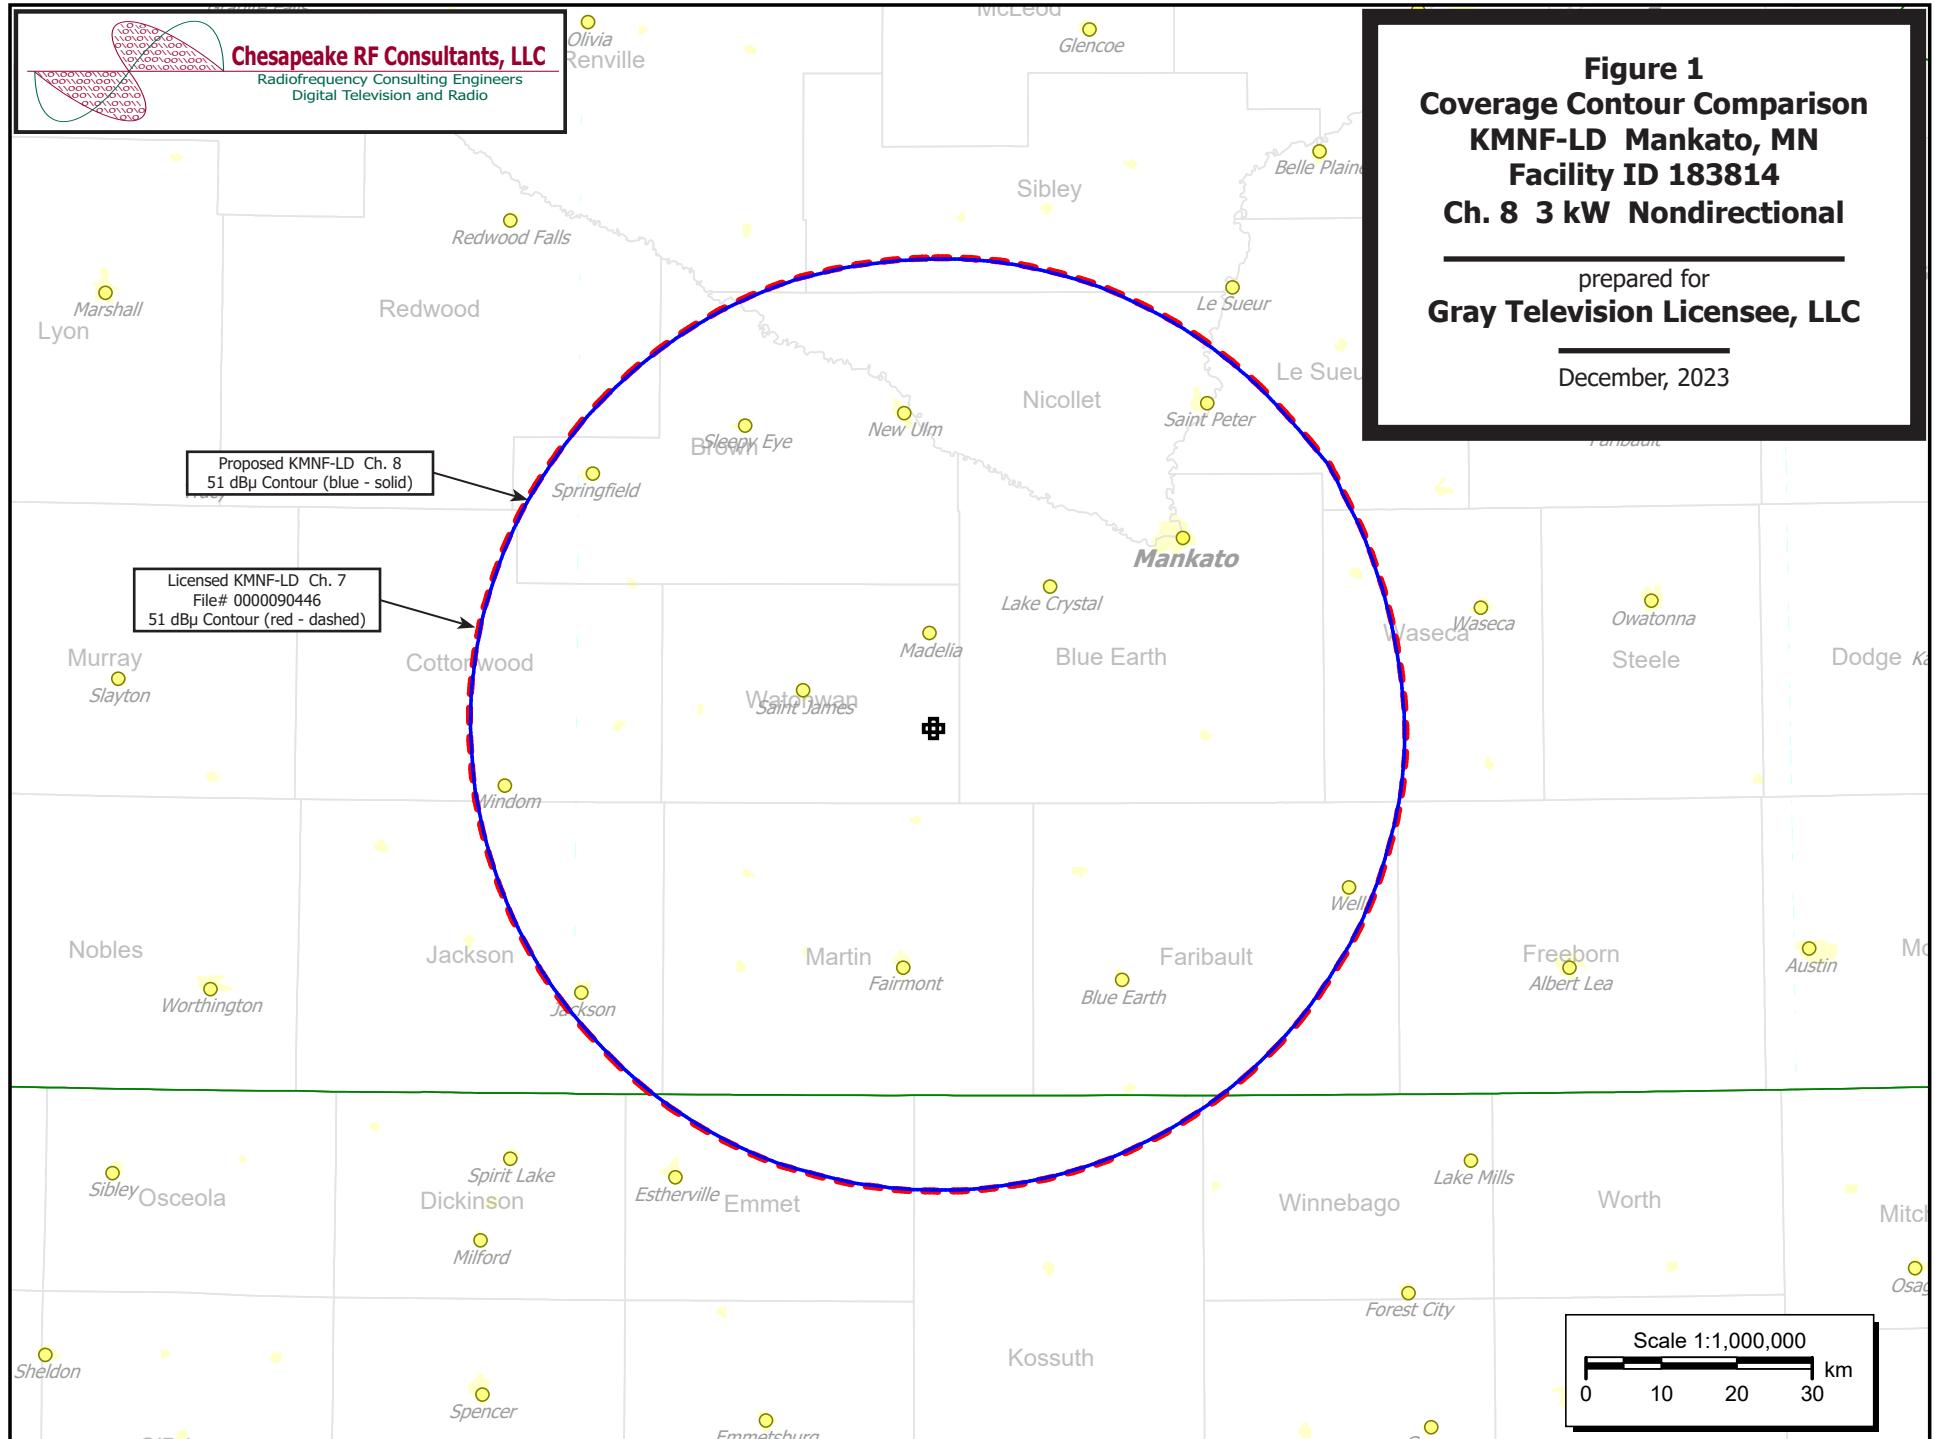

exhibit is limited to the evaluation of exposure to RF electromagnetic field. No increase in structure height is proposed.

**Channel and Facility Information**

Section	Question	Response
Facility ID	183814	
State	Minnesota	
City	Mankato	
LPT Channel	8	

Section	Question	Response
Antenna Structure Registration	Do you have an FCC Antenna Structure Registration (ASR) Number?	Yes
	ASR Number	1025277
Coordinates (NAD83)	Latitude	43° 56' 12.3" N+
	Longitude	094° 24' 39.0" W-
	Structure Type	GTOWER-Guyed Structure Used for Communication Purposes
	Overall Structure Height	327.0 meters
	Support Structure Height	307.4 meters
	Ground Elevation (AMSL)	320.4 meters
Antenna Data	Height of Radiation Center Above Ground Level	293.5 meters
	Height of Radiation Center Above Mean Sea Level	613.9 meters
	Effective Radiated Power	3 kW

Antenna Technical Data	Section	Question	Response
	Antenna Type	Antenna Type	Non-Directional
		Do you have an Antenna ID?	
		Antenna ID	
	Antenna Manufacturer and Model	Manufacturer:	Dielectric
		Model	TLS-V4
		Rotation	
		Electrical Beam Tilt	2.0
		Mechanical Beam Tilt	Not Applicable
		toward azimuth	
		Polarization	Elliptical
	Elevation Radiation Pattern	Does the proposed antenna propose elevation radiation patterns that vary with azimuth for reasons other than the use of mechanical beam tilt?	No
		Uploaded file for elevation antenna (or radiation) pattern data	
		Out-of-Channel Emission Mask:	Full Service
