

**ATSC 1.0 Launch Date Exhibit**  
**KSTR, Fac. ID 60534**

UniMas Dallas LLC (“Licensee”), licensee of KSTR(DT), Irving, Texas, RF Channel 34 (Fac. ID 60534) (“KSTR”) is filing the instant application in accordance with Public Notice 23-1086, which directs Next Gen broadcasters to submit a 3.0 license application for their 1.0 multicast streams by December 18,2023.

The “Next Gen Information” section of the license application form requires applicants to identify the applicant station’s (i) current ATSC 1.0 simulcast host and (ii) new ASTC 1.0 simulcast host. Licensee commenced simulcasts the KSTR primary stream in ATSC 1.0 format on station KUVN-DT, Garland, Texas (Fac. ID 35841), RF Channel 33 at the time the Dallas market transitioned to ATSC 3.0 broadcasts, and is not seeking to change its ATSC 1.0 simulcast host for its primary stream by this application. Accordingly, Licensee has listed KUVN-DT, Garland TX (Fac. ID 35841), RF Channel 33 in response to both of these questions.

Similarly, the license application form requires applicants to include the estimated date on which the applicant anticipates ceasing ATSC 1.0 simulcast service on its current host and commencing ATSC 1.0 simulcast service on its new host. As the application does not allow entry of a past date, Licensee has listed December 18, 2023 in response to this question.
