

TECHNICAL STATEMENT  
K257CD PHOENIX, ARIZONA, CH. 257D  
LPFM BROADCASTING, LLC  
MINOR CHANGE APPLICATION  
DECEMBER 2023

This Technical Statement is made in support of a minor modification of FM translator station, K257CD at Phoenix, Arizona, facility ID 38482. K257CD seeks to relocate to an adjacent tower site located just 0.1 kilometers away on the same “Shaw Butte” communication site and remain a “fill-in” for KQFN(AM) Tempe, Arizona, facility ID 7701. K257CD seeks to make a minor technical change to replace its current directional antenna. No other changes are being made. The following will show that the new proposed operation of K257CD will meet all of the Commissions technical requirements for an FM translator station.

The new proposed operation of K257CD specifies a maximum Effective Radiated Power of 0.25 kilowatts (250 watts). It will operate with a directional antenna with an “off the shelf” type antenna, or a BEXT TFC2K-D custom composite pattern with circular polarization. The antenna will be mounted on an existing non-registered tower, at the Shaw Butte communications tower site, with an overall height of 24 meters above the ground. The antenna will be mounted with a Center of Radiation of 14 meters above the ground, and 659 meters Above Mean Sea Level. The coordinates of this tower are located at N 33° 35' 39.2", W 112° 05' 10.5", NAD 83.

Figure 1 is a detailed interference study conducted on channel 257D with these new proposed facilities. It shows that the new operation of K257CD will not cause any interference to any existing or proposed FM stations on any of the pertinent same channel

or adjacent channels to channel 257 with the exception of third adjacent channel stations, KMVP-FM Phoenix, Arizona, facility ID 52514, operating on channel 254C and KESZ Phoenix, Arizona, facility ID 40992, channel 260C.

The proposed operation of K257CD on 257D is located within the protected 60 dB $\mu$  contour of 3rd adjacent channel of KMVP-FM. Figure 2 shows the predicted F(50-50) field strength of KMVP-FM at the proposed K257CD transmitter site is 87.4 dB $\mu$ . Therefore, the respective predicted interfering contour F(50-10) generated by the proposed K257CD on channel 257D is an additional 40 dB $\mu$  or 127.4 dB $\mu$ .

The proposed operation of K257CD on 257D is located within the protected 60 dB $\mu$  contour of 3rd adjacent channel of KESZ(FM). Figure 3 shows the predicted F(50-50) field strength of KESZ(FM) at the proposed K257CD transmitter site is 86.9 dB $\mu$ . Therefore, the respective predicted interfering contour F(50-10) generated by the proposed K257CD on channel 257D is an additional 40 dB $\mu$  or 126.9 dB $\mu$ .

Figure 4 shows the coverage area for the worse case 126.9 dB $\mu$  interference contour F(50-10) and shows that there is no population in the area of interference. The applicant, LPFM Broadcasting, LLC, respectfully requests a waiver of C.F.R. 74.1204(d) of the Commission's rules based on the fact that there is no population within the area of predicted interference. There are no homes nearby the proposed existing tower site, which is a privately owned on 1/2 acres with private access. The transmitter building is uninhabited and does not have indoor plumbing. The area around the tower base is fenced. Figure 11 is a vertical pattern study with KESZ utilizing the proposed BEXT TFC2K-D. It shows that the proposed interference contour will not extend more than 45 meters from the base of the tower. It should be noted that the new proposed operation of

K257CD will only be 0.1 kilometers from the currently licensed 250 watt ERP operation of K257CD. No interference complaints have been received from the multi-year operation of K257CD. Should any unforeseen actual interference be caused, the licensee will immediately cease broadcasting with K257CD until such interference can be eliminated.

Figure 5 shows the directional antenna data for the new proposed operation of K257CD.

Figure 6 is a more detailed interference study with KEMP(FM) Payson, AZ, facility ID 164203, on channel 257C3.

Figure 7 is a more detailed interference study with a new pending LPFM application (file no. 0000233082), facility ID 788541 at Komatke, AZ on channel 256D.

Figure 8 is a more detailed interference study with KRPH-FM1 Morristown, AZ, facility ID 189907, on channel 258D.

The proposed operation of K257CD Phoenix, Arizona will be considered a “Fill-In” operation for KQFN(AM) Tempe, Arizona. KQFN(AM) operates with 24 kilowatts daytime with a non-directional antenna system on 1580 kHz. Figure 9 shows that the proposed 60 dB $\mu$  contour for the proposed K257CD will not extend beyond the daytime 2.0 mV/m contour of KQFN. Since this is a “Fill-In” translator, the maximum ERP will not exceed the maximum permissible ERP of 250 watts in any azimuth.

Figure 10 shows the present and proposed 60 dB $\mu$  for K257CD.

It was found that the new proposed operation of K257CD Phoenix, Arizona on channel 257D, will satisfy all of the required commission rules and regulations for an FM translator station.

Terrain database is GLOBE 30 Sec , R= 73.215 qualifying spacings or FCC minimum Spacings in KM, M= Margin in KM  
In & Out distances between contours are shown at closest points. Reference zone= West Zone, Co to 3rd adjacent.  
All separation margins (if shown) include rounding.

Ant Column: (D= DA Standard, Z= DA 73.215, N= Not DA 73.215, \_= Omni), Polarization (C,H,V,E), Beamtilt(Y,N,X)  
\*\*"affixed to 'IN' or 'OUT' values = site inside restricted contour.

≤ = Station meets FCC minimum distance spacing for its class.

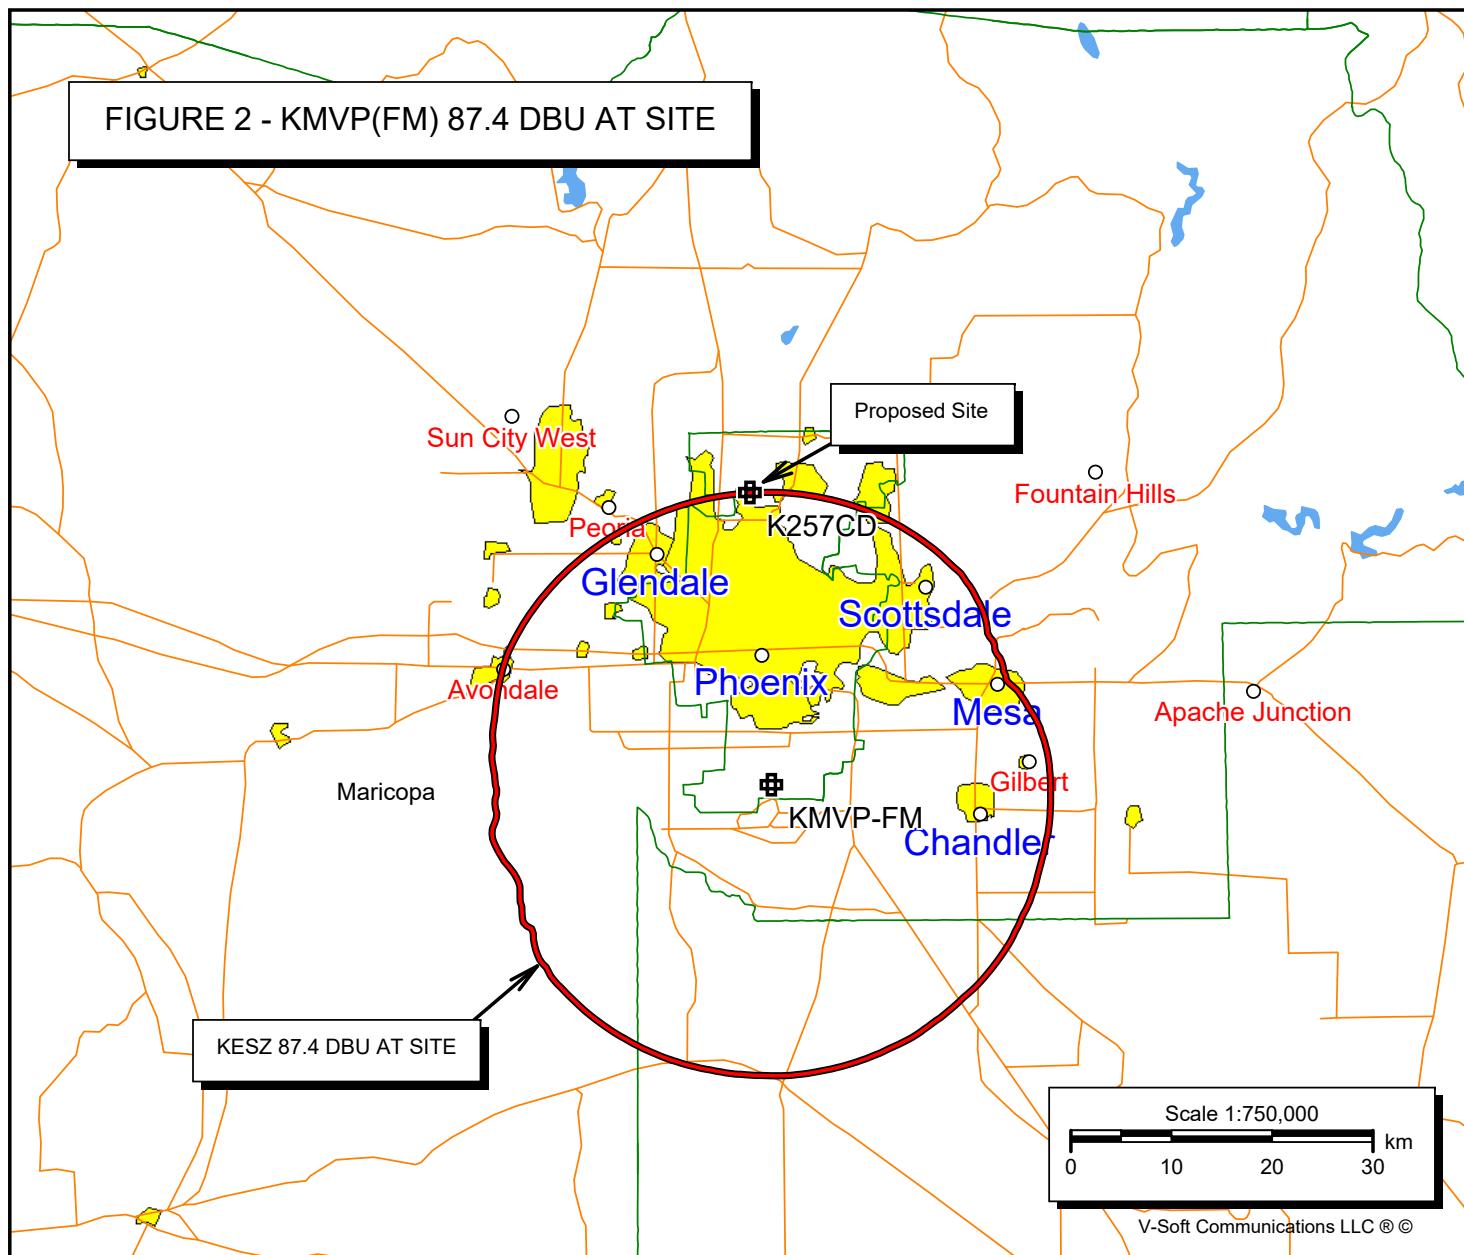

Reference station has protected zone issue: Mexico

\* No actual interference will be caused to either KMVP-FM or KESZ since the 127.4 dbu interference contour will not cover any population. It should also be noted that K257CD is moving only 0.1 kilometer to an adjacent tower site located on the same "Shaw Butte" communication sites with the same 250 watts maximum ERP. No interference complaints have ever been filed against K257CD to date.
