

The Licensee requests special temporary authority (STA) to continue operating at a reduced power of 4kW, representing 25% of the licensed power of 19.5 kW. This reduction is intended to offset the Licensee's cost of electrical power at Licensee's transmitter site which has increased significantly since the start of last year and allows the Licensee to continue to service its community. The Licensee experienced further increases in electrical costs over the past six months but anticipates costs to stabilize and decrease later this year, allowing the Licensee to resume full power. Given the above, the Licensee respectfully requests the grant of STA for up to six months.
