

SPECIAL OPERATING CONDITION
WWST Corporation, LLC
Wooster, OH

The WQKT construction permit includes a special operating condition requiring the submission of an exhibit documenting compliance with the FCC's RF exposure standards if the antenna which is installed isn't the presently licensed Harris FMXH-6AE six bay nondirectional antenna and prohibiting the commencement of automatic program tests if a different antenna is utilized. Because this license application specifies this presently licensed antenna, this special operating condition is moot and WQKT is conducting program tests with these presently licensed facilities at the corrected coordinates.
