Request for Special Temporary Authority to Operate at Reduced Power

KETP(FM), Enterprise, Oregon, Facility ID No. 174467 (the “Station”), has been operating at reduced power since January 13, 2024. Specifically, the Station’s transmitter has been operating at very low power due to extreme winter weather and suspected ice accumulation on the transmit antenna resulting in a high Voltage Standing Wave Ratio.

It does not appear that the temperature is going to increase enough for the ice to melt any time soon. And, due to the extreme weather conditions and road closures, travel to the transmitter site has been made difficult. Oregon Public Broadcasting is working diligently to restore the Station to full-power operations but it cannot currently be determined when it will be possible to resolve the Station’s antenna issues described above.
