

## **Request for Special Temporary Authority**

KITX (FID 26159) is granted authorization to operate at 50 kW with an antenna positioned 152 meters above ground level.

The licensed antenna and the upper portion of the tower were destroyed when copper thieves severed several guy wires.

KITX has resumed broadcasting by employing a temporary emergency antenna installed on the remaining portion of the tower. The technical specifications for the emergency facilities are as follows:

Coordinates: 33 54' 39.4" N (licensed location)  
95 30' 3.8" W

Antenna: OMB SGP4R

TPO: 7.9 kW

ERP: 15 kW

The Licensee has initiated the procurement of a new antenna and tower sections to bring the station back to its authorized specifications as soon as possible.

In the interim, the Licensee is seeking Special Temporary Authority ("STA") to operate with the emergency antenna mentioned earlier, operating at reduced power and height.

The Licensee respectfully requests the approval of the STA for a duration of 180 days.
