ENGINEERING REPORT

K242CW, Oxnard, CA, STA

ENGINEERING STATEMENT

Due to difficulties locating at the CP tower site, that of KVEN AM's tower, an STA is proposed to operate from the licensed site (a nearby equipment building roof-top), but with less ERP than the licensed facility. The maximum ERP of the STA will be 60 watts, more than half of the licensed 130 watt maximum ERP. The STA 60 dBu F50,50 contour is completely within the 60 dBu F50,50 contour of the licensed facility.

All required protections are met by contour non-overlap pursuant to Section 74.1204, with the exception of protection to KLJR-FM, Santa Paula, CA (244A) and KCAQ, Camarillo, CA (240B1 licensed; and 240B1 CP). Since the STA is for less ERP than the licensed facility and also proposes the same licensed antenna (a Scala CA5-FM/CP) aimed in the same bearing (190 degrees True) as the license, KLJR-FM and KCAQ are adequately protected.
