

### Extraordinary Circumstances Causing KGRY-LD Silence

On September 1, 2023, a severe storm swept through the area in which the station's transmitter site is located and damaged the station's transmitter building and antenna. The licensee has secured a replacement antenna and cable, but it still requires a new ATSC 3.0 MUX to return the station to operation. It anticipates that the additional equipment will be received in the next 30 to 45 days, at which point it will be installed, and the station will be returned to operation, but until then the station will remain off-air. Accordingly, the licensee is seeking extension of the KGRY-LD authority to remain silent until the repairs necessary for operation can be completed.
