

Exhibit E-30

The proposed facility should be exempt from environmental processing as it would not involve a site location specified in Section 1.1307(a)(1)-(7) of the Commission's Rules. In addition, the proposed facility would not utilize high-intensity obstruction lighting or constitute an RF exposure hazard to persons at the site.

The proposed facility would operate with an effective radiated power of 6.00 kilowatts at a center of radiation of 56.3 meters above ground level. The antenna type proposed for this facility is of a roto-tiller design. The Commission's FM Model software package calculates the maximum power density at ground level for this facility to be $14.23 \mu\text{W}/\text{cm}^2$ at a distance of 28 meters from the tower base. Since this predicted power density is less than $200 \mu\text{W}/\text{cm}^2$, it is respectfully submitted that the proposed facility would not constitute an RF exposure hazard, and therefore should be exempt from environmental processing.
