

November 16, 2010

To whom it may concern:

The transmitter installation proposed by EMF Broadcasting to operate on 92.3 MHz with a center of radiation at 25 feet and located 75 feet from our KVML antenna should cause us no problems. This antenna will be on the West side of our transmitter building and not on the KVML tower.

In the unlikely event that there are future problems due to this installation that cannot be resolved, Clarke Broadcasting reserves the right to discontinue this arrangement.
