

NEBRASKA EDUCATIONAL TELECOMMUNICATIONS COMMISSION
KXNE-DT, 385 kW
Early Pre-Transition DTV Operation
January 2009

The applicant proposes to change the channel of its DTV assignment to the channel occupied by its current analog channel. If granted, the attached request for STA will allow NETC to begin transmitting DTV immediately on its analog channel for which it has a post transition construction permit.

We are given to understand that the Commission will allow such early transitions if no new interference is caused by this operation. To calculate the interference levels caused by the early DTV transition, we first studied the analog station to determine the level of interference the station causes to other stations. Next, we studied the DTV station's level of interference on the same channel and compared the difference. The attached study shows that at no time was the percentage of interfered population caused by the DTV station larger than that already caused interference by the analog station.

The attached OET-69 computerized analyses were run on a Sun SPARC workstation. The computer program is the identical program, written by Bill Meintel, which is used by the FCC for its DTV analysis. The answers derived by this program should be identical to those the Commission receives in its own offices.

For these studies, results of interference to allocation plans were not considered, since only protection to the licenses and construction permits are pertinent during the early transition period.

The analysis shows that there is no increase of interference to all relevant stations by the proposal. To establish a baseline, we analyzed the existing level of interference caused by KXNE-TV's licensed analog operation (BLET-20040413ABI) on Channel 19 with 1683 kW. (See Attachment A.) This study shows that interference is caused by KXNE-TV to KTVG, Channel 19 in Grand Island and KSIN-TV, Channel 27 in Sioux City.

We then studied the proposed KXNE-DT operation on Channel 19 with 385 kW, included as Attachment B, the OET-69 analysis of the proposed DTV station showed that there is no increase in interference to either of the identified stations nor any other stations.
