Proposed Nighttime Operation

Polnet Communications, Ltd. ("Polnet"), licensee of WTMY, 1280 kHz, Sarasota, Florida, is requesting Special Temporary Authority ("STA") to temporarily collocate the WTMY transmitting operation at another existing AM transmitter site (WSDV) because of the loss of the WTMY transmitter site lease. It is believed that the existing WSDV non-directional antenna system can be readily employed for this purpose by using an existing, on-site diplexer that will only require minor retuning adjustments specific to the involved frequencies.

Polnet is presently authorized to operate WTMY at a power of 0.5 kW during daytime hours, and 0.34 kW during nighttime hours, through the use of a directional antenna system. A daytime non-directional STA power of 0.1 kW has been proposed. Similarly, a nighttime operating power of 25% of the presently authorized 0.34 kW night power (0.085 kW) is being proposed herein. (It is noted that the STA form does not permit a power figure of 0.085 to be successfully entered – it appears to round the entered value to 0.1 kW. Accordingly, it is requested that the instant STA request be considered on the basis of the nighttime power described in the Exhibit, 0.085 kW.)

Nighttime allocation studies show that a non-directional WTMY facility operating into the WSDV tower as proposed (with 0.085 kW) would not create prohibited interference to (enter into the night limit of) any other station. The two stations of principal concern (WIPC and WODT) are shown below:

For WIPC in Lake Wales, Florida the following tabulation applies:

<u>Call</u>	<u>Freq</u> (kHz)	<u>City</u>	<u>Sta</u> <u>te</u>	<u>Ct</u>	<u>Dist</u> (km)	<u>Azi</u> (deg)	<u>Theta</u>		<u>Max</u> V-Rad (mV/m)	<u>SW</u> Mult (uV/m)	<u>Limit</u> (mV/m)	<u>(%)</u>	<u>RSS</u> Limit (mV/m)

WGBF	1280	EVANSVILLE	IN	US	1270.3	157.5	3.6	7.8	520.99	30.93	3.223	20.3	16.17	

The nighttime interference free contour of the proposed STA operation is 12.526 mV/m. The map included as **Figure 3** shows the location of this contour. It is estimated that nighttime interference free coverage would be provided to a majority (57% of the area) of the community of Sarasota, Florida.
