

cloverdaleEXHIBIT 12

Page #1, Waiver Request of Section 74.1204

New-T, Cloverdale, OR, Channel 258 41 Watts
Calvary Chapel of Twin Falls, Inc. 7/03

The proposed site is contained entirely inside the service contour of second-adjacent stations KODZ, Eugene,OR and KRKT, Albany, OR

KODZ

The proposed site is contained entirely inside the service contour of second-adjacent Station KODZ, Channel 256, Class C, 100 kW, Eugene, OR. As shown by the map on **page #2** of this waiver request, the level of the second-adjacent station KODZ arriving protected F(50,50) signal at the proposed transmitter site is in excess of 100-dBu. Using the Undesired-to-Desired method for calculating proposed interference (the basis of the FCC current contour overlap regulations and an acceptable method for the purposes of determining lack of interference for an FM Translator), the proposed interfering contour with respect to KODZ is of 140-dBu (free-space contour method employed). This means that the 140-dBu interfering signal would, in the worst case at the maximum radial, extend 5 meters from the center of radiation, which is proposed at 44 meters AGL. A 7.5 min Topo Map is being supplied to show that there are no buildings, businesses, residences or roads within this interference area. Since no population inhabits this 140-dBu interference area, Calvary Chapel of Twin Falls, Inc. respectfully requests a waiver of the FM translator contour overlap regulations with respect to second-adjacent channel station KODZ.

KRKT

The proposed site is contained entirely inside the service contour of second-adjacent Station KRKT, Channel 260, Class C0, 100 kW, Albany, OR. As shown by the map on **page #3** of this waiver request, the level of the second-adjacent station KRKT arriving protected F(50,50) signal at the proposed transmitter site is 63-dBu. Using the Undesired-to-Desired method for calculating proposed interference (the basis of the FCC current contour overlap regulations and an acceptable method for the purposes of determining lack of interference for an FM Translator), the proposed interfering contour with respect to KRKT is in excess of 103-dBu (free-space contour method employed). This means that the 103-dBu interfering signal would, in the worst case at the maximum radial, extend 324 meters, or .324 km from the base of the tower. A 7.5 min Topo Map is being supplied to show that around this existing communications site there are no buildings, businesses or residences within this interference area, which is .4km around the tower site. Since no population inhabits this 103-dBu interference area, Calvary Chapel of Twin Falls, Inc. respectfully requests a waiver of the FM translator contour overlap regulations with respect to second-adjacent channel station KRKT.
