## COMPREHENSIVE TECHNICAL EXHIBIT

**Application for Construction Permit**  
**K43JQ, FCC ID 131348, Bismarck, ND**  
**FCC File Number BLTTL-20080801BBL**  
**EICB-TV East, LLC**

**Application for Flashcut to Digital operation.** The within filing seeks only a flashcut to digital operation. The location remains unchanged as does the antenna pattern, whose service contour encompasses that of the underlying license.

**Use of Unregistered Tower.** The application is on an existing 20 meter tower. The proposal was subjected to *Towair* analysis and found not to require registration with the FCC, thanks to being located far enough distant to clear the 100:1 pass slope.

**Interference Analysis.** An OET 69 Longley-Rice study exhibit for the above-captioned application was performed on the Techware, Inc. FCC interference analysis program with a Sun Blade computer. The study shows the application complies with §74.793.

**Dismissal of Existing Companion Digital Channel.** There is a construction permit outstanding for a digital companion associated with K43JQ. It is K34IT-D, FCC ID 167503, FCC file number BDCCDTL-20061003AFG. Inasmuch as two digital facilities cannot simultaneously derive from an underlying analog channel, the applicant requests dismissal of K34IT-D upon grant of the within application.
