

## **Comprehensive Engineering Exhibit**

### **RF Statement:**

The proposed WZBL transmitter site is a multi-user site that is fenced with controlled access.

The permittee/licensee will, upon completion of construction and during the equipment test period, make proper radiofrequency electromagnetic (RF) field strength measurements throughout the transmitter site area to determine if there are any areas that exceed the FCC guidelines for human exposure to RF fields. If necessary, a fence will be erected or moved at/to such distances and in such a manner as to prevent the exposure of humans to RF fields in excess of the FCC Guidelines (OET Bulletin No. 65, Edition 97-01, August 1997).

The fence will be a type which will preclude casual or inadvertent access, and include warning signs at appropriate intervals which describe the nature of the hazard. Any areas within the fence found to exceed the recommended guidelines must be clearly marked with appropriate visual warning signs.
