

**Environment Impact & RFR Compliance Statement**

KLDV is located at an established communications site that is in compliance with all environmental impact requirements.

The auxiliary facility will be located .02 km from the main KLDV facility, KRMT (TV), and KXKL-FM. The auxiliary facility of KXKL-FM is located on the same tower as the proposed auxiliary for KLDV.

For a worst case estimation, the RFR at the site exceeds the general population/uncontrolled MPE limit. However, calculations have previously been done to determine the area at the site where the RFR exceeds the general population/uncontrolled MPE limit and this controlled exposure area is fenced and only accessible to authorized personnel.

Appropriate RFR hazard warning signage is posted indicating RFR exposure levels to authorized personnel accessing the controlled exposure areas and areas that exceed the controlled exposure limits. The applicant certifies that in cooperation with other users of the site all authorized personnel will be protected from RFR exposure in excess of FCC guidelines while accessing any controlled exposure area, including the tower, by either reducing power or ceasing operations. Information pertaining to the contact representative of the facility will be posted.
