

Exhibit EE4 Daytime Allocation Study

The following facilities, applications and authorizations were considered in developing the daytime contours proposed in this application. Those that required further investigation or added to display the closest allocation on a given frequency, are marked with an asterisk. The marked facilities are shown on an allocation study in this exhibit. As noted, because this facility is currently operational at 10KW, there are no allocations on 2nd and 3rd adjacent channels close enough to be considered salient. Therefore, plots were constructed out to the 1st adjacent channels.
