

## Engineering Statement February 2009

This engineering statement was prepared on behalf of Mississippi Valley Broadcasters, LLC in response to questions raised by staff. WLXR has an interference agreement with WNMN that allows upgrading to a 6 kW Class A facility. The details of the agreement specify that the 60 dBuV contour of WLXR at any new location must not extend any further in the direction to WNMN.

The present and the proposed 60 dBuV contours were plotted (Figure 1) and it clearly shows that the contour of the proposed location will not extend the 60 dBuV contour in the direction of WNMN.

Respectfully Submitted,

A handwritten signature in black ink that reads "Garrett G. Lysiak". The signature is written in a cursive style with a large initial 'G'.

Garrett G. Lysiak, P.E.
