Re: WXVS-FM

Mr. Godfrey,

Jampro Antennas, Inc. supplied a replacement antenna for WXVS-FM on 90.1 MHz per the original job documentation circa February 1986. All antenna parts, mounting brackets, and parasitic reflectors were manufactured strictly adhere to the documentation of the 4-bay antenna installed previously. The increase in bays from four to six will present no adverse affects on the azimuth pattern; decrease the amount of transmitter power required to reach the licensed ERP.

Please feel free to contact me at 916-383-1177 or doug@jampro.com if you have any questions or need additional information.

Regards,

Douglas McCabe
COO

Jampro Antennas, Inc.
