

March 2016
New FM Channel 278C3
Dove Creek, Colorado
Principal Community Coverage Study

The 70 dBu contour from the proposed facility, as calculated using the standard contour prediction methodology described in §73.313 of the Commission's Rules, does not encompass the entire community of Dove Creek. The far side of Dove Creek is located 11.7 kilometers from the proposed transmitter site. The standard 70 dBu contour extends approximately 9.0 kilometers towards Dove Creek.

It was previously established in BNPH-20121119AGS, however, that a supplemental showing using alternative contour prediction methodology is justified in this instance in accordance with §73.313(e), and demonstrates the required coverage of Dove Creek. The instant application does not alter the transmitter site location, antenna height, or power in the direction of Dove Creek. Therefore, it is not believed necessary to resubmit the instant application to OET for their review.
