

### Compliance with RF Exposure Guidelines

I, Robert Probert, am employed by Mapleton Communications, LLC, licensee/permittee of FM Translator K284AE, Ashland, Oregon. As chief engineer responsible for K284AE I am familiar with the transmit site and the FCC rules regarding human exposure to RF emissions.

Access to the transmit site is restricted by both a remote location and by a locked main access road gate, which is located approximately three miles from the actual K284AE transmit site. Warning signs describing the radiofrequency electromagnetic field are posted at this gate, which is the only vehicular access road to the transmit site. Additional signs are posted when entering the transmit complex, and at the actual K284AE transmit tower.

Signed,

A handwritten signature in black ink, appearing to read "Robert Probert", with a long horizontal stroke extending to the right.
