KRSF BROADCAST FACILITY MINOR VARIANCE TO CONSTRUCTION PERMIT

KRSF has installed the proposed facility antenna at 50 feet as opposed to the 55 feet (17.1 meters) as identified on the BPED-20160317ABN construction permit. This does not materially affect any coverage or interference parameter for the station. It theoretically increases the RF power density at the ground level. However, RF exposure measurements taken at the site attached in a separate document verify that no RF exposure hazard exists at all.

This slight modification was made due to mechanical constraints at the site. KRSF has complied with all the other standard and special operating conditions or restrictions and KRSF respectfully requests that this change in the facility be noted in its authorized license.

Sincerely,

A handwritten signature in black ink that reads "Greg Best, PE". The signature is written in a cursive, flowing style.

President
