WXRK(FM) aux#3
FCC 301-FM Application
Environmental
February 28, 2012

An Environmental Assessment is not required, as grant of this application would not be considered a major environmental action.

The proposed transmitting antenna will utilize an existing antenna mounted on the antenna mast on the Empire State Building. The structure has been registered with the Commission. No change is proposed in the overall height of the mast above sea level. It is proposed that the WXRK auxiliary operation will not be multiplexed with other licensees of the antenna. A switch will provide that only WXRK or WWFS or the already licensed users can use the auxiliary antenna at a time. No full power auxiliary shared operation is being proposed for WXRK. (WWFS is concurrently filling an application for a CP to utilize this same antenna as an auxiliary.)

The proposed transmitting facilities will comply with the FCC guidelines limiting human exposure to radio frequency energy. The maximum power density level at ground level, calculated in accordance with OET Bulletin No. 65 (August 1997), would be less than 5% of the applicable limit for exposures of unlimited duration. Accordingly, the proposed facility is categorically excluded by FCC Rules from having to consider the contributions of other stations at the site. If work is done on the tower in an area where over exposure could occur, the Licensee in coordination with the other users will take necessary action to prevent the overexposure of workers on the tower including reducing the transmitting power or ceasing operation completely.
