

EXHIBIT 12

Page #1, Waiver Request of Section 74.1204

Baton Rouge, LA New-T 27 Watts ERP

Calvary Chapel of Twin Falls, Inc. 7/03

The proposed site is contained entirely inside the service contour of second-adjacent stations WFMF, Baton Rouge, LA and WBBE, Hammond, LA

WFMF

The proposed site is contained entirely inside the service contour of second-adjacent Station WFMF.Lic&CP, Channel 273, Class C, 80&100kW, Baton Rouge, LA. As shown by the map on **page #2** of this waiver request, the level of the second-adjacent WFMF.Lic&CP arriving protected F(50,50) signal at the proposed transmitter site is 91-dBu. Using the Undesired-to-Desired method for calculating proposed interference (the basis of the FCC current contour overlap regulations and an acceptable method for the purposes of determining lack of interference for an FM Translator), the proposed interfering contour with respect to WFMF.Lic&CP is 131-dBu (free-space contour method employed). This means that the 131-dBu interfering signal would, in the worst case at the maximum radial, extend 10 meters from the center of radiation, which is proposed at 80 meters AGL. According to information supplied by the tower lessor, Pinnacle Towers, this tower is not located on the top of a building. It is however located near Airline Highway and though there are buildings in the area, they do not reach the interference zone, which is located 70 meters or 299 feet, from the ground elevation. A 7.5 Min Topo Map is included with this Exhibit with a red arrow pointing to the tower site. Since no population inhabits this 131-dBu interfering area, Calvary Chapel of Twin Falls, Inc. respectfully requests a waiver of the FM translator contour overlap regulations with respect to second-adjacent channel stations WFMF.Lic&CP.

WBBE

The proposed site is contained entirely inside the service contour of second-adjacent Station WBBE.Lic&Mod, Channel 275, Class C, 100kW, Baton Rouge, LA. As shown by the map on **page #2** of this waiver request, the level of the second-adjacent WBBE.Lic&Mod arriving protected F(50,50) signal at the proposed transmitter site is 80-dBu. Using the Undesired-to-Desired method for calculating proposed interference (the basis of the FCC current contour overlap regulations and an acceptable method for the purposes of determining lack of interference for an FM Translator), the proposed interfering contour with respect to WBBE.Lic&Mod is 120-dBu (free-space contour method employed). This means that the 120-dBu interfering signal would, in the worst case at the maximum radial, extend 37 meters from the center of radiation, which is proposed at 80 meters AGL. According to information supplied by the tower lessor, Pinnacle Towers, this tower is not located on the top of a building. It is however located near Airline Highway and though there are buildings in the area, they do not reach the interference zone, which is located 37 meters or 121 feet, from the ground elevation. A 7.5 Min Topo Map is included with this Exhibit with a red arrow pointing to the tower site. Since no population inhabits this 120-dBu interfering area, Calvary Chapel of Twin Falls, Inc. respectfully requests a waiver of the FM translator contour overlap regulations with respect to second-adjacent channel stations WBBE.Lic&Mod.
