SECTION II - APPLICANT INFORMATION		
1. NAME OF APPLICANT Archange Communications		
MAILING ADDRESS P.O. Box 1526		
CITY Fairhope	STATE Alabama	ZIP CODE 36532

2. This application is for:

- ☒ Commercial ☐ Noncommercial
☒ AM Directional ☐ AM Non-Directional

Call letters WNGL	Community of License Mobile, AL	Construction Permit File No. BNPED-20071022BPM	Modification of Construction Permit File No(s). BP-20100129ADD	Expiration Date of Last Construction Permit
----------------------	------------------------------------	---	---	---

3. Is the station now operating pursuant to automatic program test authority in accordance with 47 C.F.R. Section 73.1620?

☒ Yes ☐ No

If No, explain in an Exhibit.

Exhibit No.

4. Have all the terms, conditions, and obligations set forth in the above described construction permit been fully met?

☒ Yes ☐ No

If No, state exceptions in an Exhibit.

Exhibit No.

5. Apart from the changes already reported, has any cause or circumstance arisen since the grant of the underlying construction permit which would result in any statement or representation contained in the construction permit application to be now incorrect?

☐ Yes ☒ No

If Yes, explain in an Exhibit.

Exhibit No.

6. Has the permittee filed its Ownership Report (FCC Form 323) or ownership certification in accordance with 47 C.F.R. Section 73.3615(b)?

☒ Yes ☐ No

☐ Does not apply

If No, explain in an Exhibit.

Exhibit No.

7. Has an adverse finding been made or an adverse final action been taken by any court or administrative body with respect to the applicant or parties to the application in a civil or criminal proceeding, brought under the provisions of any law relating to the following: any felony; mass media related antitrust or unfair competition; fraudulent statements to another governmental unit; or discrimination?

☐ Yes ☒ No

If the answer is Yes, attach as an Exhibit a full disclosure of the persons and matters involved, including an identification of the court or administrative body and the proceeding (by dates and file numbers), and the disposition of the litigation. Where the requisite information has been earlier disclosed in connection with another application or as required by 47 U.S.C. Section 1.65(c), the applicant need only provide: (i) an identification of that previous submission by reference to the file number in the case of an application, the call letters of the station regarding which the application or Section 1.65 information was filed, and the date of filing; and (ii) the disposition of the previously reported matter.

Exhibit No.

8. Does the applicant, or any party to the application, have a petition on file to migrate to the expanded band (1605-1705 kHz) or a permit or license either in the existing band or expanded band that is held in combination (pursuant to the 5 year holding period allowed) with the AM facility proposed to be modified herein?

☐ Yes ☒ No

If Yes, provide particulars as an Exhibit.

Exhibit No.

The APPLICANT hereby waives any claim to the use of any particular frequency or of the electromagnetic spectrum as against the regulatory power of the United States because use of the same, whether by license or otherwise, and requests and authorization in accordance with this application. (See Section 304 of the Communications Act of 1934, as amended).

The APPLICANT acknowledges that all the statements made in this application and attached exhibits are considered material representations and that all the exhibits are a material part hereof and are incorporated herein as set out in full in

CERTIFICATION

1. By checking Yes, the applicant certifies, that, in the case of an individual applicant, he or she is not subject to a denial of federal benefits that includes FCC benefits pursuant to Section 5301 of the Anti-Drug Abuse Act of 1988, 21 U.S.C. Section 862, or, in the case of a non-individual applicant (e.g., corporation, partnership or other unincorporated association), no party to the application is subject to a denial of federal benefits that includes FCC benefits pursuant to that section. For the definition of a "party" for these purposes, see 47 C.F.R. Section 1.2002(b).

☒ Yes ☐ No

2. I certify that the statements in this application are true, complete, and correct to the best of my knowledge and belief, and are made in good faith.

WILLFUL FALSE STATEMENTS ON THIS FORM ARE PUNISHABLE BY FINE AND/OR IMPRISONMENT (U.S. CODE, TITLE 18, SECTION 1001), AND/OR REVOCATION OF ANY STATION LICENSE OR CONSTRUCTION

FCC NOTICE TO INDIVIDUALS REQUIRED BY THE PRIVACY ACT AND THE PAPERWORK REDUCTION ACT

The solicitation of personal information requested in this application is authorized by the Communications Act of 1934, as amended. The Commission will use the information provided in this form to determine whether grant of the application is in the public interest. In reaching that determination, or for law enforcement purposes, it may become necessary to refer personal information contained in this form to another government agency. In addition, all information provided in this form will be available for public inspection. If information requested on the form is not provided, the application may be returned without action having been taken upon it or its processing may be delayed while a request is made to provide the missing information. Your response is required to obtain the requested authorization.

Public reporting burden for this collection of information is estimated to average 639 hours and 53 minutes per response, including the time for reviewing instructions, searching existing data sources, gathering and maintaining the data needed, and completing and reviewing the collection of information. Comments regarding this burden estimate or any other aspect of this collection of information, including suggestions for reducing the burden, can be sent to the Federal Communications Commission, Records Management Branch, Paperwork Reduction Project (3060-0627), Washington, D. C. 20554. Do NOT send completed forms to this address.

THE FOREGOING NOTICE IS REQUIRED BY THE PRIVACY ACT OF 1974, P.L. 93-579, DECEMBER 31, 1974, 5 U.S.C. 552a(e)(3), AND THE PAPERWORK REDUCTION ACT OF 1980, P.L. 96-511, DECEMBER 11, 1980, 44 U.S.C. 3507.

**Re: Archangel Communications
WNGL – Facility ID No. 854
FCC Form 302-AM
FRN: 0017024795**

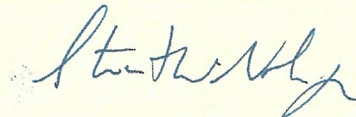

Dear Ms. Dortch:

On behalf of our client, Archangel Communications, enclosed is FCC Form 159, Fee Remittance Advice, and our check in the amount of \$1,320.

This check is in payment of the fee for the filing of FCC Form 302-AM, Application for a New License and AM Directional Antenna, on December 21st, 2010.

Please contact me if there are any questions. I appreciate your attention to this matter.

Best,

Stuart W. Nolan, Jr.

APPLICATION FOR STATION LICENSE
ARCHANGEL COMMUNICATIONS, INC.
WNGL AM RADIO STATION
1410 kHz - 4.6/5.0 kW DAN
MOBILE, ALABAMA
December 2010

This Technical Statement was prepared on behalf of Archangel Communications, Inc. ("ACI"), licensee of radio station WNGL, 1410 kHz, Mobile, Alabama. ACI holds a valid construction permit (BP-20100129ADD) that authorizes WNGL to construct a non-directional antenna system with 5.0 kilowatts during daytime hours and a two tower directional antenna system with 4.6 kilowatts during nighttime hours. This application seeks program test authority and a station license with a computer analyzed directional operation under the provisions of Section 73.151(c). The calculations shown herein are for the daytime power of 5.0 kilowatts and the nighttime power of 4.6 kilowatts.

The towers are identified using the nighttime numbering sequence of Tower #1(s) and Tower #2(n). The Daytime tower is Tower #1(s). The towers and ground system were constructed in accordance with the terms of the WNGL construction permit and specifications that were provided in the application for construction permit.

Information is provided herein to demonstrate the directional antenna parameters for the nighttime authorized patterns have been determined to be in accordance with the requirements of Section 73.151(c) of the Commission's rules. The system has been adjusted to produce antenna monitor parameters within +/- 5 percent in ratio and +/- 3 degrees in phase of the modeled values, as required by the rules.

There are five special operating conditions and/or restrictions listed on the outstanding station license that will continue to be met. Condition #1 states:

“The permittee must submit a proof of performance as set forth in either Section 73.151(a) or 73.151(c) of the rules before program tests are authorized. A proof of performance based on field strength measurements, per Section 73.151(a), shall include a complete nondirectional proof of performance, in addition to a complete proof on the (night) directional antenna system. The nondirectional and directional field strength measurements must be made under similar environmental conditions. The proof(s) of performance submitted to the Commission must contain all of the data specified in Section 73.186 of the rules. Permittees who elect to submit a moment method proof of performance, as set forth in section 73.151(c), must use series-fed radiators. In addition, the sampling system must be constructed as described in Section 73.1515(c)(2)(i).”

This application supports the application for station license using the moment proof rules of 73.151(c).

Condition #2 states:

“Permittee shall install a type accepted transmitter, or submit application (FCC Form 301) along with data subscribed in Section 73.1660(b) should non-type accepted transmitter be proposed.”

The applicant has installed a Broadcast Electronics AM6A AM Transmitter, SN 111074-004, which is type accepted and is in compliance with this condition.

Condition #3 states:

“Prior to construction of the tower authorized herein, permittee shall notify AM Stations WNTM (Facility ID: 8695), WGOK (Facility ID: 56716) and WABB (Facility ID: 70656) so that, if necessary that AM station: may determine operating power by a method described in Section 73.51(a)(1) or (d), and/or request temporary authority from the Commission in Washington, D.C. to operate with parameters at variance in order to maintain monitoring point field strengths within

authorized limits. Permittee shall be responsible for installation and continued maintenance of detuning apparatus necessary to prevent adverse effects upon the radiation pattern of the AM station. Both prior to construction of the tower and subsequent to the installation of all appurtenances thereon, a partial proof of performance, as defined by Section 73.154(a) of the Commission's Rules, shall be conducted to establish that the AM array has not been adversely affected and prior to or simultaneous with the filing of the application for license to cover this permit, the results submitted to the Commission."

Attached as Exhibits #9, #10 and #11 are field measurements taken on the respective stations before and after construction of the WNGL towers. WNGL personnel were not provided access to the transmitter sites to log station operating parameters, but it is believed that none of the stations are adversely or significantly affected by the construction of the WNGL towers, as supported by the measurements. Re-licensing of the three stations is not required.

Condition #4 states:

"Licensee shall be responsible for satisfying all reasonable complaints of blanketing interference within the 1 V/m contour as required by Section 73.88 of the Commission's rules."

The applicant recognizes their responsibility in this matter and will continue to comply with this condition.

Condition #5 states:

"Ground system consists of 120 equally spaced, buried, copper radials about the base of each tower, each 53.34 meters in length except where terminated by property boundaries or where intersecting radials are shortened and bonded to a transverse copper strap midway between adjacent towers."

The applicant verifies the ground system is as described and accepts this condition.

Field measurements were conducted along the specified monitor point radials, which are detailed in Exhibit #7.

Following a Post-Construction Survey, it is necessary to correct the geographic coordinates of WNGL Center of Array. The correction of coordinates from: North Latitude 30° 42' 25"; West Longitude 88° 03' 45" to: North Latitude 30° 42' 24"; West Longitude 88° 03' 43" is less than 3 seconds of latitude and longitude and is, therefore, allowed within the scope of this Form 302 license application. When approval from the FAA is received for the minor correction of coordinates of the two towers, Antenna Structure Registration Number 1273479 and Antenna Structure Registration Number 1273480 will be modified.

We have tried to be as accurate as possible in the preparation of this application. All information contained in this application was extracted from the CDBS database. We assume no liability for omissions or errors in this source. Should there be any questions concerning the information contained herein, we welcome the opportunity to discuss the matter by phone at 912-638-8028 or by email at rsg@grahambrock.com.

EXHIBIT #1

Analysis of Tower Impedance Measurements to Verify Method of Moments Model

Tower base impedance measurements were made at the final J-plugs within the Antenna Tuning Units ("ATU's") using an Array Solutions, POWER AIM 120, Vector Impedance Analyzer in a calibrated measurement system. The other tower was open circuited at the same points where impedance measurements were made ("reference points") for each of the measurements, in compliance with Section 73.151(c)(1).

The reference point in each ATU is followed by the feed-line that exits the ATU enclosure and is connected to the tower above the base insulator. Circuit calculations were performed to relate the Method of Moments modeled impedances of the tower feed points to the ATU output measurement (reference) points, as shown on the following pages. The XL shown for each tower, which was calculated for the assumed stray inductance, was less than 10 uH, in compliance with Section 73.151(c)(1)(vii).

The modeled and measured base impedances at the ATU output jacks, with the other towers open circuited at their ATU output jacks agree within +/- 2 ohms and +/- 4 percent for resistance, as required by Section 73.151(c)(2) of the FCC's Rules.

EXHIBIT #2

Derivation of Operating Parameters for Directional Antenna

The Method of Moments model of the array, following verification with the measured individual open circuited base impedances, was utilized for directional antenna calculations. Calculations were made to determine the complex voltage values for sources located at ground level under each tower of the array to produce current moment sums for the towers that, when normalized, equated to the theoretical field parameters of the authorized directional antenna pattern. With these voltage sources, the tower currents were calculated. Ten segments were used for each tower, so that the modeled current pulse at the base of the tower would correspond to the toroid pick-up at the output of the ATU. As the tower structures, sampling pickups, and sampling lines are identical, the antenna monitor ratios and phases corresponding to the theoretical parameters were calculated directly from the modeled tower currents.

EXHIBIT #3

Method of Moments Model Details for Towers Driven Individually

The array of towers was modeled using Westberg Engineering PhasorPro 2.1.1.12. One wire was used to represent each tower. The electrical length of each tower was specified using degrees at the operating frequency of 1410 kHz (1.41 MHz), as taken from the theoretical directional antenna specifications. Each tower was modeled using nine segments. As the towers are 98.1 degrees in electrical height, the segment length is 9.81 electrical degrees, in compliance with Section 73.151(c)(1)(iii).

The individual tower characteristics were adjusted to provide a match of their modeled impedances, when presented to a circuit model, that included branches representing the stray feed-line hookup inductances at the tower bases, with the base impedances that were measured at the output jacks of the ATU's, while the other towers of the array were open circuited. The Method of Moments model assumed loads at ground level having the reactance that was calculated for them using the base circuit models for the open circuited towers of the array.

Each tower's modeled height, relative to its physical height, falls within the required range of 75% to 125%, in compliance with Section 73.151(c)(1)(v). Each tower's modeled

radius falls within the range of 80% to 150% of the radius of a circle having a circumference equal to the sum of the widths of the tower sides, which is in compliance with Section 73.151(c)(1)(i). The array consists of identical, uniform cross section towers having a face dimension of 18 inches.

Method of Moments Model Details for Directional Antenna

The array of towers was modeled using Westberg Engineering PhasorPro 2.1.1.12 with the individual tower characteristics that were verified by the individual tower impedance measurements. Calculations were made to determine the complex voltage values for sources located at ground level under each tower of the array to produce current moment sums for the tower that, when normalized, equated to the theoretical field parameters of the authorized directional antenna pattern. The following pages contain details of the method of moments model of the directional antenna pattern.

EXHIBIT #5

Direct Measurement of Power

WNGL will operate with a non-directional daytime power of 5.0 kilowatts and a common point impedance of 54.4 -j 0.8 ohms and a nighttime common point impedance of 50.2 -j 0.2 ohms.

Daytime

5,000 Watts

Common Point Resistance = 54.4 Ohms

Manipulating $I^2R = P$

Where I = Common Point Current R = Common Point Resistance P = Power in Watts

$$I = (5,000/54.4)^{.5} = 9.59 \text{ Amps at Common Point}$$

The daytime non-directional power will be monitored at the common point.

Daytime tower impedance was checked under power with a Delta Operating Impedance Bridge, OIB-2, SN 1221 and found to be 112 ohms Resistance, +138.2 ohms Reactance.

Nighttime

Due to the nighttime directional antenna operation, the common point input powers are adjusted with reference to the transmitted power, in accordance with Section 73.51(b)(1)¹.

Adjusting the input power by 1.08 results in the following:

$$4,600 \text{ Watts} \times 1.08 = 4,968 \text{ Watts}$$

$$\text{Common Point Resistance} = 50.2 \text{ Ohms}$$

$$\text{Manipulating } I^2R = P$$

$$\text{Where } I = \text{Common Point Current} \quad R = \text{Common Point Resistance} \quad P = \text{Power in Watts}$$

$$I = (4,968/50.2)^{.5} = 9.95 \text{ Amps at Common Point}$$

Common point impedance was measured utilizing an Array Solutions, POWER AIM 120, Vector Impedance Analyzer in a calibrated measurement system.

1) Section 73.51 Determining operating power. (b) The authorized antenna input power for each station shall be equal to the nominal power for such station, with the following exceptions: (1) For stations with nominal powers of 5 kilowatts, or less, the authorized antenna input power to directional antennas shall exceed the nominal power by 8 percent.

EXHIBIT #6

Sampling System And Measurements

The sample system for WNGL consists of electrically equal lengths of Cellflex LCF12-50J phase stabilized coaxial transmission lines terminated into Delta TCT-1 toroid sample transformers. The impedance at the input to the sample lines, terminated by the toroid sample transformers, was measured and tabulated in Exhibits #6A and #6B.

Impedance measurements of the antenna monitor sampling lines were made using an Array Solutions, POWER AIM 120, Vector Impedance Analyzer in a calibrated measurement system. The measurements were made looking into the antenna monitor ends of the sampling lines without the sampling lines connected to the toroid samples under open-circuited conditions.

Exhibits #6C and #6D detail the sample transmission line measurements with frequencies above and below carrier frequency where resonance (zero reactance corresponding with low resistance) was found. As the length of a distortionless transmission line is 180 electrical degrees at the difference frequency between adjacent frequencies of resonance and frequencies of resonance occurring at odd multiples of 90 degrees electrical length, the sampling line length at the resonant frequency below carrier frequency, which is the closest one to the carrier frequency,

was found to be between 296.0 and 296.7 electrical degrees, within the 1.0 degree variance, as specified by Section 73.151(c)(2)(i). The electrical length at carrier frequency appearing in Exhibit #6A was calculated by ratio of the frequencies.

In order to determine the characteristic impedance values of the sampling lines, open-circuit measurements were made with frequencies offset to produce +/- 45 degrees of electrical length from resonance. The characteristic impedance was calculated using the following formula where $R_1 + jX_1$ and $R_2 + jX_2$ are the measured impedances at the +45 and -45 degree offset frequencies, respectively:

$$Z_0 = ((R_1^2 + X_1^2)^{1/2} * (R_2^2 + X_2^2)^{1/2})^{1/2}$$

Toroid current transformer calibration was checked by placing each transformer in line at the transmitter output connected to the station's common point. The transformers were connected to the station's antenna monitor with short equal length transmission line jumpers. The relative ratio and phase of all transformers was found to compare identically to each other, within the manufacturer's specifications.

WGOK Partial Proof Measurements

Attached as Exhibits #9A through #9D are tabulations of field measurements conducted on WGOK's (900 kHz) directional antenna which demonstrates a lack of significant impact on the WGOK directional antenna system. All monitor points remain in tolerance with their station license limits. While the WNGL personnel were not provided access to the transmitter site to log operating parameters of WGOK before and after the construction of the WNGL towers, no change outside of licensed limits resulted from the WNGL construction as verified by WGOK personnel. A filter to preclude interference to the WGOK (900 kHz) transmitter by WNGL (1410 kHz) was installed; no impact on the operation of WGOK was noted. Mike Gliner conducted the field measurements and his affidavit is included with this application.

WNTM Partial Proof Measurements

Attached as Exhibits #11A through #11D are tabulations of field measurements conducted on WNTM's (710 kHz) directional antenna which demonstrates a lack of significant impact on the WNTM directional antenna system. While the WNGL personnel were not provided access to the transmitter site to log operating parameters of WNTM before and after the construction of the WNGL towers, no change is believed to have resulted from the WNGL construction. Mike Ginter conducted the field measurements and his affidavit is included with this application.

Archangel Radio
2851 Old Shell Road
Fairhope, Alabama 36532

Subject: Archangel Radio Towers

CMG Job Number: 1558

Dear Mr. White:

Cowles, Murphy, Glover & Associates, LLP herewith submits this letter certifying the locations of the Archangel Radio towers.

Azimuth 0°00'0" (True North) Distance 232.50

Tower data as follows:

Horizontal Datum: NAD 83 established with RTK GPS referencing City of Mobile GPS control monument "03-42-07"

Vertical Datum: NAVD 88 established with RTK GPS referencing City of Mobile GPS control monument "03-42-07", Elevation 23.80 NAVD

Plane Coordinates refer to Alabama West Zone, NAD 83 (1992 adjustment)

TOWER No. 1
LAT N 30°-42'-26.151"
LON W 88°-03'-43.112"
N=257662.77
E=1791889.03
ELEVATION=32.3'

457 St. Michael Street • Mobile, Alabama 36602 • (251) 433-1611 • Fax (251) 433-1411

TOWER No. 2
LAT N 30°-42'-23.849"
LON W 88°-03'-43.098"
N=257430.27
E=1791889.03
ELEVATION=35.3'

I, Gary D. E. Cowles, a Registered Professional Engineer in the state of Alabama,
herewith certify the locations of the towers are true and correct.

If any additional information is required at this time, please advise.

Sincerely,

Gary D. E. Cowles, PE

Attachments: na

Affidavit

The included measurements in the WNGL license application:

WABB 4.3, 60, 244, 303 and 322.5 degree radials

WGOK 135, 175, 220 and 265 degree radials

WNTM 25, 55.5, 83, 205, 354.5 degree radials

Pre construction measurements were taken between June 30, 2010 and August 2, 2010.

Post construction measurements were taken between October 5, 2010 and November 5, 2010.

The above measurements were taken by me using a Potomac Instruments FIM 41, serial number 1329. This meter was most recently calibrated in October 2006. My credentials are a matter of record. These measurements are true and accurate to the best of my knowledge.

Michael B. Gliner

EXHIBIT #13

Summary of Post-Construction Certified Array Geometry

The tower relative distances, provided in feet on the Certified Survey drawing, (see Exhibit #5A) are converted to electrical degrees at 1410 kHz and used, along with the survey tower azimuths relative to True North, to calculate the distance in electrical degrees from the location specified in the theoretical directional antenna pattern array geometry. Exhibit #13A is a tabulation showing those distances and other data that is relevant to their determination.

The "as built" tower displacements from their specified locations expressed in electrical degrees at carrier frequency, which corresponds to space phasing differences in the far-field radiation pattern of the array, are well below the +/- 3 degree operating phase range specified for antenna monitor parameters by the FCC Rules.

EXHIBIT #14

Correction of Coordinates for the Center of the Array

Following the post construction survey of Exhibit #13, it was determined that a correction of the geographic coordinates of the center of the WNGL array is required. The correction of coordinates from North Latitude 30° 42' 25" and West Longitude 88° 03' 45" to North Latitude 30° 42' 24" and West Longitude 88° 03' 43" is less than 3 seconds of latitude and longitude; therefore, a correction of coordinates is allowed within the scope of this Form 302 license application. Included as Exhibit #14A are the calculations and NADCON conversion to establish this correction.

AFFIDAVIT AND QUALIFICATIONS OF CONSULTANT

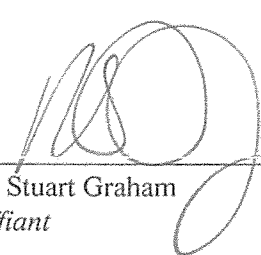

State of Georgia)
St. Simons Island) ss:
County of Glynn)

R. Stuart Graham, being duly sworn, deposes and says that he is an officer of Graham Brock, Inc. Graham Brock has been engaged by Archangel Communications, Inc., to prepare the attached Technical Exhibit.

His qualifications are a matter of record before the Federal Communications Commission. He has been active in Broadcast Engineering since 1979.

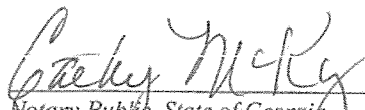

The attached report was either prepared by him or under his direction and all material and exhibits attached hereto are believed to be true and correct.

This the 21st day of December 2010.

R. Stuart Graham
