**Subject:** Pending STA of WBGN-LP (59A > 16D)

Dear Mr. Habib,

Pending before you is an STA request to allow WBGN-LP to change channels to 16 and convert to digital. Your study determined that this STA request is predicted to cause interference to WPCW, 19, Jeanette, PA.

We have studied that problem and determined that by reducing our proposed ERP from 15 kW to 14 kW (both towards the horizon and at any angle) we reduce the interference caused to WPCW to an acceptable level (i.e. < 0.5%). Accordingly, please amend our STA request to reduce the ERP to 14.0 kW.

We would also like to ensure that our STA reflect a site elevation of 355.0 m. AMSL, an overall tower height above ground of 182.8 m. AGL and an antenna make and model of DIE TFU-16DSB-B(C).

I believe with these changes the STA should be grantable. Please let me know if anything remains in error.

Thanks,

Ben. Perez
